`pipePlot`: Wrap `gnuplot` for piping

Bernhard Haubold

Max-Planck-Institute for Evolutionary Biology, Plön, Germany

June 13, 2018

1 Introduction

`PipePlot` reads x/y coordinates as input from a pipeline and drives `gnuplot`. It was written to combine the piping capability of `graph` with the beauty of `gnuplot` output.

2 Dependency

Works only if `gnuplot` is installed.

3 Getting Started

`PipePlot` was written in C on a computer running Linux and should work on any standard UNIX system. However, please contact me at `haubold@evolbio.mpg.de` if you have any problems with the program.

- Change into directory

  ```
  cd pipePlot
  ```

  and list its contents

  ```
  ls
  ```

- Generate `pipePlot`

  ```
  make
  ```

- List its options

  ```
  ./pipePlot -h
  ```

- Test the program

  ```
  ./pipePlot data/test.dat
  ```

4 Change Log

- Version 0.1 (August 3, 2017)
    - First running version.
- Version 0.2 (August 17, 2017)

- – Fixed production of postscript output.
  - – Fixed typo in interface.
- Version 0.3 (October 17, 2017)
  - – Included "dumb" terminal.
- June 13, 2018
  - – Uploaded to `github`.
